

Cut-Away Model Rocket Booster Motor Wrap Set

Use the above two labels as indicated in the kit instructions to identify the various internal parts of the model rocket motor.

Use the wrap on the right for the outside of the cut-away motor model to give it the look of a real model rocket motor!

Best if printed on Avery 8165 (or equivalent) Full Sheet Label paper. Carefully cut out the labels and apply to the model as shown in the instructions. Once applied, seal the edges with a thin film of white glue, smoothed out with your finger. You may wish to clear coat these labels, but test it out on a piece of scrap label material before applying to your model to assure compatibility.
